

Dear Hiring Manager,

I am writing to express my interest in senior Quality Engineering, Test Automation Architect, and QA leadership opportunities within your organization. With over 15 years of experience in software quality assurance and automation, I bring a combination of hands-on technical depth, quality governance, and team leadership across enterprise products.

In my current and previous roles at Dell Technologies, Nokia Networks, and Tata Consultancy Services, I have led end-to-end quality delivery, designed and modernized automation frameworks, and supported complex releases across cloud, virtualization, infrastructure, and enterprise platforms. My experience includes Java, Selenium WebDriver, TestNG, REST API testing, Python, Cypress, Jenkins CI/CD, Docker, Kubernetes, and cloud-based test environments.

I have built scalable automation solutions using reusable components and Page Object Model principles, strengthened release readiness through risk-based testing and defect governance, and mentored teams of quality engineers. I also work closely with development, product, and architecture stakeholders to translate requirements into effective quality strategy, test coverage, and measurable delivery outcomes.

Alongside my quality engineering background, I bring customer and client solution awareness, experience in security-focused engineering work, and continued learning in Generative AI and Machine Learning through IIT Kanpur. I would welcome the opportunity to discuss how my technical leadership and practical automation experience can contribute to your team.

Thank you for your time and consideration.

Sincerely,
Athmeeya
